Sohan Bhat

Frisco, Texas - sohanrambhat@gmail.com - sohan-bhat.github.io - github.com/sohan-bhat

Education

Heritage High School, Frisco, Texas Class of 2029
Sophomore.

Projects

Taro 2026
A voice assistant for Google Meet. It carries out the action items from the meeting, such as posting to Slack and filing GitHub issues. Built with TypeScript, Next.js and Gemini. github.com/sohan-bhat/taro

Oopsy 2026
An undo tool for the terminal. It snapshots files, git state and Postgres data before a destructive command runs, so the damage can be reversed. Written in Go and installable through Homebrew and Scoop. sohan-bhat.github.io/oopsy

Wobbl 2026
A simulation toolkit that lets AI coding agents run engineering simulations, such as stress, heat and circuit analysis, and check the results. Published on PyPI and npm. Built with CalculiX, gmsh and ngspice. sohan-bhat.github.io/wobbl

signnet 2026
A convolutional neural network that classifies German traffic signs at about 90 percent accuracy. Built from scratch in NumPy with no PyTorch and no autograd. github.com/sohan-bhat/signnet

Ensemble 2026
A shared orchestral score that many people write into at once, note by note. Built with React, Express and VexFlow. github.com/sohan-bhat/ensemble

VacantCourt 2025
An Android app that runs an on-device model to spot players on a court, paired with a website that shows which local courts are free. Built with Kotlin, TensorFlow Lite and React. github.com/sohan-bhat/VacantCourt

Mochi 2024
A web app that suggests recipes from the ingredients you already have. Built with React, Node.js and Groq. github.com/sohan-bhat/Mochi

CareerAI 2024
A web app that suggests career paths from a list of interests, using AI. Built with React, Node.js and Groq. github.com/sohan-bhat/CareerAI

Research

Early detection of silent training failures in neural networks 2026
Preprint on networks whose loss keeps falling while the model stays wrong, and how to catch that early. Read the preprint.

Experience and Activities

Programmer, FRC Team 2714
Java for the robot, mainly autonomous routines and Limelight vision. Fort Worth District winner, 2025 and 2026.

USACO competitive programming
Training toward the Gold division.

Skills

Languages: Python, Java, Go, TypeScript, JavaScript, Kotlin, C++
Frameworks and tools: NumPy, React, Next.js, Node.js, Express, PostgreSQL, Git and GitHub, CalculiX, gmsh, ngspice
